

# Data Migration

Imagility is a cloud-based end-to-end immigration platform and follows a 3-step migration process for smooth Data migration

- Gather Requirements

- Prepare Analysis Doc

- Data Mapping

- Sign Off

## 01 Preliminary data migration

This initial data migration procedure is a technical discussion and will include the “as-is” process, procedures, instructions used by your organization for delivery of data, and secure ways to send sample data to us for preliminary data migration testing and to estimate timelines.

## Data Set Evaluation 02

We will study and analyze your data set with respect to the legacy system and make an estimate for migrating your data to Imagility. Our team will create code to migrate your data and schedule a call to demonstrate this migration process, for you to review the quality of migrated data and provide feedback.

- Create Test Migration Environment

- Migrate Data Test

- Testing & Fixes

- UAT & Sign Off

- Final Data Backup

- Final Data Migration

- Internal Testing & Fixes

- Walkthrough & UAT

- Sign Off

## 03 Complete Data Migration

Once you accept the preliminary data migration, the final migration with the complete data set will be executed to complete the project. The user will still have access to review the information and provide final sign-off.
