# Petition Analysis feature for automated & intelligent reviews

**Petition Analysis carries out an elaborate process of checks** through built petitions and makes intelligent recommendations through reports to improve petition success rates, giving you infinite chances to correct and improve the identified elements in the petition.

## Petition Analysis Categories

Imagility's Petition Analysis carries out checks /analysis of the petition created under the following categories executed as different steps while analyzing a petition:

### 1. Review filing requirements

In this category, Imagility checks for the correctness of different categories of the fees based on the type of petition, number of employees of the company. Also, filing date (current date) is validated against the position start date to avoid petition filing earlier than required.

### 2. Analyze the job description

In this category, petition analysis evaluates the position requirements to check whether it meets the requirement of specialty occupation. Petition analysis engine runs through the entered job duties of the petition, to check whether those describe and qualify as specialty skills, required to perform the job. Job duties are evaluated, and recommendations are given for improvement, if any.

### 3. Identify any missing documents

In this category, documents under Beneficiary education and experience documents, Beneficiary immigration documents, Beneficiary employment documents and Petitioner/Client documents are validated for availability based on the type and status of beneficiary.

#### **4. Check for the correctness of the LCA**

In this category, Imagility validates the LCA applicability to the petition position. In addition, LCA validity dates and work location are checked against petition employment dates and location.

#### **5. Review position related requirements**

In this category, Imagility evaluates the position requirement to check whether it meets the requirement of specialty occupation in terms of education, training required to perform the duties including the skills required for the position.

#### **6. Review the beneficiary qualifications for the position**

Here the qualifications of the beneficiary like degree, field of study, tools and technologies used, prior experience in performing similar duties are checked against the requirement of the position.

#### **7. Check the employer-employee relationship**

Availability of required documents that shows the beneficiary has an offer of employment with the petitioner are checked under this category. Also looked for document that has the proper reporting structure established within the organization and/or at client location, if applicable.

### **8. Check the eligibility of the beneficiary's status**

Beneficiary needs to ensure he/she is working in the US, by maintaining the required status. i.e., having valid status at the time of filing the petition and having job continuity during his/her stay without a gap of more than 60 days etc. Imagility evaluates along these criteria in this category.

### **9. Review petitioner requirements**

In this category, Imagility validates petitioner information against reference databases, checks for any identifiers for fraud based on employee strength, company revenue, frequency of petition filing and the petitioner's eligibility to file certain types of petitions. Also, presence of signatures from Petitioner & Attorney in relevant forms is checked to ensure the petition completeness.

Thus, the petition analysis process makes the petition thorough, and fills all that gaps to make the petition complete, thereby increasing its success rate hugely.
